

## **Beyond Acceptances**

In birth, we are equal. In life we become superior, or less. And, in death we are, equalized. Herein we learn, the value of our immortality. This defines our natural progression; and our continual growth.

Our intelligence to genetically modify. The ability to create, and have control, and dominion over, another. That our, freewill, our determinism, or, our fatalistic belief, proves our suitable evolution as a species.

That the created, and permitted, unrestricted energy of our souls. Vibrates at different rates, causing all change, and our frequency finds it corresponding pair. Creating our reality, in all faithfulness.

This is the consciousness that drives creation, reality, and realm. It affects evolution. This continues evermore and recures, beyond the boundaries of being human. Or, other idealisms.

Interconnectedness, our souls live on. In all, through all, and is part of all. All, of the greater consciousness, we refer to as "God". Only then in consciousness, can we attain a spiritual state. And begin to estimate, learn, and merge with; the Maker, of all that is.
