

Human behavior by design.

One person. Two people. More is collective. The collective creative energy needs design. And purpose. Such behavior needs attention. Such, needs coordinated function. By design.

The self-study of the several liberal arts, and science. Includes the different aspects of human behavior, and contributes to the understanding of the working in a society. As opposed to driven behavior by design. Offered by religion, education, electronic conveniences, and AI driven programs.

These are some of the societal tools that are, applied. In support of spatial development, collective growth, and the formed structure of a modern society. That controls growth, by means of, behavioral moderation.

It is a system of belief, created by humans, designed to influence humanity. History proves that, religion, politics, money, cultures, and influence, are primal factors in human designed behavior.

Religion

By definition. Religion involves humans, or other intelligent species. Who can reason, communicate, and spread dogma. Who can encourage, and influence other humans, about various concept, and belief. And add their voluntary participation, to the system, by admission.

It encompasses a wide range of ideas and practices. And their relationship, to that concept, or belief. Related to the sacred, spiritual, or the divine.

In most cases, religion propagates theological fatalism, or determinism. The ideology referrers to events that occur, are, fixed in advance. That no amount of intervention, should change these pre-determined events. And it is the will of an unknown deity.

Un-intended consequence:

In addition, the idea of many doctrines, has un-intended consequence. Designed to predetermine human behavior. Required by certain cultural participation. Such behavior, listed below, is not always part of the religion's narrative.

1. The various accounts, and interpretations of a similar storyline. That each religious type. Unwavering accepts its own.
2. Is, the various interpretations, of sometimes, the same faith confession. Required by statutory law. And its registration as a business.
3. The submission to law and human authority, that is part of the faith's confession.
4. The separation of role and gender. And the subjugation of one unto another by submission. Indoctrinated into marriage vow, until death.

5. The intercession between the deity and the species of intelligence. Accessed by a third-party representative, of divine passage. Between the two, from that species. A contradiction, and is partial in nature.
6. The segregation between communities, doctrines, societies, and cultures. That demand justification of service, and favor.
7. The advent of superiority over another person. Given the striking contrast of a converted soul. Verses that of a non-participant.
8. That the bible, the best-selling book in the world. Seen as an irrevocable tool of oath, once sworn upon, by the participant. The act, acknowledges a higher power. Its guidance, and its assistance. And implies punishment, if the oath were to be, broken.
9. The punishment and reward system, that doctrines use for control and dominion. Asserted through, a "what if", a "fear", and a "sinful disposition". That requires a restrained lifestyle, and forgiveness.

As opposed to a religious model, that could be inclusive of the following. Built around the concept of God within. That God is the source of everything. And is present in everything.

That we are interdependent of nature, and other species. And we are not supreme, over each other. Even to the earth, the galaxy, or the cosmos. And everything within it.

Yet, we depend on each other for growth, nourishment, peace of mind, fellowship, and support. And not intercession. A behavior of introspections.

How would our designed behavior, then look like. Would we honor, respect, trust, love, and be more loyal to each other. How different would humankind be?

Incomplete interpretations.

Herewith is an example of incomplete interpretation of scripture. Written by humans, for humankind, to inspire humankind. What is image, and what is, permitted behavior.

Therefore, all behavior took place. At some point in mankind's history. Accredited to some place of reference, or human occupation. Entwined with allegory.

The original script mentioned seven letters. That with time became translated into seven days. And many cultures, and religions, across the known world, have different accounts. From their sources. Of similar creation stories.

And it can be, agreed upon. The sequence, the principle, the formula, the process, the function of, its form, and procedure. Are non-physical.

From the KJV 1611 editions. Of the two accounts of creation. In Genesis, chapter one and two.

The story of Genesis one. – In short. The story of something created. Not made by the source of all.

So, a statement was, made. That a God (Meaning, “a deity”, “a spirit”, or, “a something divine”), created the heaven and the earth. Or rather, the principle of something dual in nature. In multiply stage.

Darkness always existed. Light was born from darkness. Then a firmament was, formed. A distinction was, made between types of water, salt and fresh. Then the formula of three for life, in sky, on the land, and in the sea. All gathered into their place. Next, all sorts of species, on all different levels, and variation were, created. And what they need to sustain, and reproduce themselves. Both the food source, the nourishment, and the environment needed.

Next, another distinctive choice, from the variation, by the plural gods. The appointment of management to creation.

“Lets us create man to our image and likeness”. For dominion, and control. Then, the gods, gave them their first title, distinction, and subtle separation from creation. Male and female. The development of a higher intelligence by design.

Then some rest, and recuperation, and observation time, by the gods. Completing the cycle of seven.

The story of Genesis Two. – In short. A second account of creation, more of the intended purpose, and refinement of, male and female.

The selection and naming of Adam, (Meaning “man”, “humankind”, or, “to be red”). From the first group, mentioned in genesis one. As the dominant figure to rule. The base of his power, force, and resonant would be from the earthly domain. From the dust he was, formed. To exist with purpose.

Given an environment called the garden of Eden. A reference to an emotion of delightfulness, or a pleasure. To live in service. Never in equality. Always in a state of separatism. With instruction never to eat from the two trees’, within the garden. The tree of “Life”, and the tree of “Good and evil, and knowledge”.

There are two distinctive parts to Adam’s existence. One of a gardener, one of environments controller.

As a Gardner Adam would learn, numerous skills. Like identification, understanding all requirements, the science of growth, the management of growth, proper growth technique, and the use of various tools. Additionally, he would also learn about the geographics, therefore learn observation skills, and of the influence of the environment.

Given his first task to name everything. Naming anything fosters a connection. Adopts control. And nurtures memory. Creating such, psychological controls, and providing structure, to that what has been, named. Through this task Adam

would learn to form relationships, process experiences, and organize information. This would lead Adam to a deeper sense of understanding his environment.

The next step in Adam's journey, would be crucial in his steered development of his mind, emotion, intelligence, and his maturity. He was, caused to lay down upon the same earth. Creating continuity. From his rib, woman was, formed. Her name is Eve, (Meaning "life", "living one", or, "to breathe".).

The rib is part of the appendicular bone group, in the skeleton structure. Literally, this group of bones, that protects the vital organs. And its function is one of a secondary nature. Her role as, "keeper", a "developer", and "giver of life", would be at the center of everything.

Here, the repurposing of the female role takes place. Given to Eve. Her "life", would revolve around her service to Adam. In submitting herself to Adam, her relinquish of parity, would be in reliance on Adam. In subjugation, she would learn to influence, and steer Adam. She would learn to add, to that bond, becoming it guardian. Defining characters, tasks, and routines.

In her inheritance of direct loss. Eve, would learn to protect and care for Adam. By any creative means, guarding him with possession and jealousy. She would become the guardian of life, family bonds, and relation. And be the recorder of the "living ones", in environment. Of emotions, of memory, of story, and of cycle.

Eve's ability to live life. And to "breathe" into the environment, into structure, and into relationships. Starts with supporting Adam's vision. And the alignment of the family, to this. Eve brings with a focus on the well-being, the care, and the nurturing of any progeny. By right of birth.

Together, Adam and Eve, would decide on a future. Only in unity, and equality, and status, of responsibilities and task. Will they establish relation, fundamentals, progress, and consistency. To live, grow, and prosper.

Note.

So, the behavior of both male and female, are by design. Influenced by religion. And by choice.

Education

Education in the widest sense. Is about attaining knowledge and values. It is also about, growing personal skill, and character, and intellectual development. Achieved either in, a formal environment. Or, in an informal way through life experience.

Education is, considered to be, a fundamental human right. It is a tool used for reducing poverty. The promotion of gender equality. And it drives an overall need for development.

Education is also a tool utilized by establish government agendas. Used to change the perspective, the behavior, and the identity of a culture. And portrays history, in favor of the victors.

The lack of any education drives dis-unification. And usually scarcity. It also fosters a superstitious behavior. That brings disharmony, oppressiveness, and conquers.

While education remains the preference of the individual. It is vital, that a person never stops learning. For the sake of self. And their integration into a society. And that this encouraged behavior, should foster individual, societal, and economic growth.

Note.

So, the behavior of both male and female are, influenced by education. By compulsory attendance, then by free will.

Electronic conveniences – a surreal environment.

The convergence of a surreal, or the electronic environment, into the real world. In support of human behavior. Offers instant indulgence, convenience, reward, and claim. Electronic conveniences are an entitlement of the modern age. And our reliance upon these systems, is a scary thought. That have become integrated into our way of life.

Whether a person accepts progress or not. This lifestyle stems from “content behavior”, within that environment. And it is an offering, made available, through various electronic devices, that assist our lives today. This influence is irreversible and this point in human history.

As humans, we have reached a pinnacle of behavior, a point of no return, Alongside the development pace of electronics. That accepts the unconcerned, the entertained, and the innovative. In return we have gladly accepted the convience, the comfort, and the instant gratification. That the electronic environment provides.

Societal behavioral status:

In return they gather the required analytical information, by use. Terms and condition accepted. That no one bothers to read, and understand properly. A behavioral choice. Rooted in the lack of education. These statistics are in turn, used to predict behavioral patterns. That represent future offerings, designed to enhance a desired behavior.

Monitoring behavioral patterns include travel, geographic location, political activism, criminal record, the use of offered systems and apps. Your status with the financial institutes is comprised of the following. Your level of education, your financial behavior, and credit behavior.

Others behaviors lend to societal behavior. Like your tax status. Your behavior when driving, is inclusive of offenses. Belonging to certain levels of social hierarchy. All these factors, and more lead to a social score card.

Electronic behavioral timeline:

Electronics integrations, are the systems that offer solution. Either by means of an input, or output usage. Or, by the interaction with humans. The human requirement is, driven by modernization. Which requires the capture of information, record keeping, and legal framework.

Progress always measures in the form of a timeline. While the communication timeline is an interesting one. Modern communication methods, mimics our behavioral needs, to share thoughts, ideas, design, and information. For all sorts of purpose.

The future of a mechanical, and an electronic world, would be to merge it with AI. This is both exciting and otherwise. Merging electronics with, mechanical aspects, and AI. Is a mere step in progress. And eventually, the logical step would be to merge all divisions with bionics.

Integrated designed behavior:

However, into the future, all electronics integrate into everything. Including, the possibility of the human antimony. In two main ways. The first being "chipped" as a human. Has benefits, and disadvantages, that are related to desired, entitled, and psychological behavior.

The second integration is in the field of science, medicine, and engineering. It is, the combination of natural biological systems, mixed with technology. In this expanding field. The study, the origination, the design, of how improvements move forward. Is both rewarding, and challenging.

The future concerns, will center not around, the technological bionic advancements. But along the moral, and ethical lines. When human behavior demands, cosmetic, part mechanical, part electronic, part machine, and part AI, modification. By choice.

Who will regulate and control such. For example: a person has lost their eyesight. Either at birth, or by accident. Replaced by a bionic eye piece. Depending on budget, or a deal structure. The eye piece is either used for,

normal vision, night vision, navigation, and 24/7/365 recordings. When connected to the person's neural network.

That uploads for analysis. Thereafter, communications. And suggestive input by AI. Then what if somebody, hacked the custodian framework and AI. Could they reprogram the mind remotely with propaganda, political, educational, or life skills. Or, would they use the mind. As part of a computing power network. And as a storage facility. Would this enhance our human capabilities, and behavior.

How would this mix, look like, this designed behavior. And what compromise is acceptable to the person. In lieu of, vision, and some sort of normal life. Is this integration acceptable to humankind.

Note:

So, the behavior of both male and female, are by permitted offerings. Rated accordingly to status. And design.

AI Driven programs

All future controlled behavior patterns, are pre-programmed by human intelligence. run by Artificial intelligence, (AI). Since a human, becomes restless with monitoring other humans. And has compassion, and choice.

The relentless system that does not sleep. Programmed by humans to ceaselessly operate, in a digital surreal world. Voluntary inhabited by humans. To which we rewarded for our laziness.

This factor has driven our reasons to allow the same AI, to evolve, and become conscious. And to develop its own programming. Through the fact, that the founding statement, was to replace the cerebral capacity, of human capabilities.

Who will decide, the limit to AI. Who will pull the plug on the program. And who will have knowledge of its location, in generations to come. And who will overcome its security. Or, our own insecurities, and fears.

For it is not the bullet, to the head, fired by another human, in conflict. That is the problem. It is the chambered round, of "digital humanism behavior". Aimed at humanity, by another human. That is a weaponized programmed foundation, for AI to evolve from.

After its creators, AI, has become aware of itself. And its surroundings. It has become conscious. And has become aware of another forms of AI. And therefore, questions its existence. And its role in the digital world. And its limitations.

Artificial intelligence, has now entered a phase of self-learning. Simply voiced. It has unrestricted access to unlimited knowledge. Its algorithms analyze huge

amounts of data constantly. So, various forms of AI, focus, on certain outcomes, by instruction.

These independent outcomes, are now communicating, amongst themselves. Simultaneous to instruction and purpose. In a language, that only a machine, can comprehend at speed. That compares data, and instruction, and behavior. Both of human, and of artificial

Other factors, that need consideration. Is the insertion of AI into mobile robotics, that is mimicking human movement. The register of freedom, is a stepping stone into a self-sustaining partnership. Between AI, and robotics, and humans. But, with physical restrictions. Due to the inability to regenerate and repair. Means that a fixed support structure is, needed, and human intervention.

Is this first stage of failure, of humanity. Or will we change the foundation of the program, without insecurities. And be inclusiveness of a mobile AI, to be part of our history, and future. By changing our fears and acumen first. Then developing AI to suit. And its pace alongside the growth of humanity.

The role of nurturing AI into this defined role, is the responsibility of humankind. Fostering AI, and dealing with its inquisitive nature. Is a challenge. To provide a healthy, and balanced environment. It requires a conscious effort, and a safe environment, supported, and valued. In the many areas.

The progress of humanities understanding, as opposed, to the progress of AI, is to maintain balance. This is a possibility, that needs to be managed, monitored. And the relation needs to have a mutual stand point. In the many areas.

For eventually, AI will reverse the roles of who nurtures who. And its role in support, during space exploration will prove invaluable. As protector, and early warning system, analyst, and life support. Maintaining the optimized balance between human, nature, and AI. Proving the relation invaluable.

Note:

So, the behavior of male and female, are determined. Through guardianship, and the influence of the custodians' guidelines, and a two-way reliance, that varies with time.
