

Principle

This section deals with principle. There are many, many more. The limit of the four principles presented, merely is illustrative in purposes. Of how their contributions add to, and function, and are like a cosmic adopted action plan. Ensuring success, on a particular level. Therefore, for each level, of Source, Maker, and Creator, there are those that are applicable. In the realms of consciousness, mind, and physical. Each have their own.

The principle of One.

One can divide into two. And multiply by division. The two are identical of the one. Now three. Three then become six. And so, on endlessly.

Unicell:

Singular cellular organisms, can live together in the same area. And each cell carries out life functions separately to live. Examples of this is bacteria. Found all over the cosmos, and preform vital roles in the eco system, and all living bodies. And includes the attributes of asexual reproduction.

Bacteria undergo recombination in the following ways.

Transformation, is the uptake of exogenous DNA from the surrounding area. Transduction, is the virus transfer of DNA between bacteria. Conjugation, is the transfer of DNA, from one bacterium to another, by cell-to-cell contact. Abortive transfer, is when transferred DNA goes to the target cell, but fails duplication as the cell divides.

RNA plays a vital role in cellular function, and gene expression. Bacteria use RNA to convert genetic information from DNA, into Proteins, that carry out the cellular process. Proteins are responsible for, cell structure, repair, growth, function, and most activities.

The simple way of understanding the process. DNA makes RNA, RNA makes Protein. Protein makes cells.

Emerging on Earth, about 3.5 – 4.0 billion years ago. Probably by asteroid deposit.

Multicell:

In contrast, multicellular organisms, need to live together, and depend on each other to survive, and function.

This process of cell regeneration, is the fundamental process needed for development, growth, and organism tissue repair. These cells could evolve independently.

Reproduction is by means of a sexual process. This process allows for the repair of the DNA structure. Also, this allows the recombination of genes, RNA, DNA, and Protein structure, from the parents. Into the new cell.

Emerging on Earth, about 1.4 - 2.0 billion years ago. And evolving from singular cells.

Thoughts on the principle of one.

It is evident that the singular cell evolved, over time into the multicell. And where forced to do so. Through the pressures of the environment and the physical changes to surroundings. And internal structure. It is possible that one group, can evolve further than another, given different variables

Eventually forming, and changing, and evolving, into the complex multicellular organisms we see today. And life as we know it. That live together, form social structure, and communicate, sharing, and storing information. Transitions like this will happen incalculable times over.

So, these groups or colonies, would have become more stable, and specialized. Due to the advance of their intelligence, and conscious mind. An internal sub-conscious driving force would develop, on a deeper level, requiring more. From the next generations nature and consistencies, or spiritual advancement. Stagnation, and regression is also possible. However, in lower percentages.

The recombination of genes from the parents, alludes to another evidence. That everything is permissible, and that the Source, is part of everything, to start with. So, the encode of the soul, either in part, or full, that survives the physical death. Must also be present in the recombination.

So, the recombination, has two opposite, or dual aspects. The physical, or defined matter. And, or the non-physical, or defined as the spiritual aspect.

The physical recombination

Is the Macromolecule exchange, that carries instruction for development, functioning, reproduction, and growth. Which ensures fertility, and avoids birth defects.

The non-physical recombination

Is the conscious mind, sub-conscious mind, the spirit, and the soul. That survives death, or passing of the physical matter. And is, considered a force, a conscious energy that drives, all matter. And holds this in a physical realm, at frequency. The form that precedes matter, by classification.

The principle of Dual.

Something that is two, something contrary, something balancing, something certain. Something that has reason. Something that can repeat. And something that can change.

I have used the incomplete example of a male and a female. In this we understand the essence of the dual principle in nature, made, and fixed. And in a species that creates. In the same space and environment. That is free to develop, stagnate, or regress by choice.

Made by Nature:

"It takes two to tango". "Three that must agree, or disagree". "And four, the group number, needed for perfect function".

And to repeat, you need both male and female. So, let us look at intended only, between the opposite sexes. Broken down into category of physical, mentally, and spiritually.

A male, and a female, being dual in nature. Would be generally inclined, through the ages. Due to physical and taught, or defined gender. And a mind formed by society. Take upon roles that are generally adapted to suit. In an environment, by freewill knowing the situation. Or, by determinism. Guided by fear and forced into situations. Or by resignation of will, to a deity. A fatalistic approach.

Like a male for example, would instinctive be in pursuit of sustainability. Have foresight of expected problems, and pursue a solution. Meeting challengers of security, in a defense, a passive, or an offense manner. Judication of moral, ethics, and discipline. Also, the innovation of new methods. And the pursuit of new territory.

In the many areas of transportation, shelter, education, food, clothing, and trade.

A male will also pursue a relation with a female, and a female will attract a male. Both with decided criteria.

A female, due to physical attributes, and their role as birth givers, to the future. Instinctively rely on their male counterpart, to provide security, support, stability, and guidance. Also, with the help, of the male and interaction with the new born. With playtime, and helping with the development of fine and gross motor skills.

As the primary role of a homemaker, they female teachers the new generation. In both the mental health and emotional departments. And as the keeper of the bond toward the new born. While caring for the physical attributes, that match said milestones. Within the seven-year foundation period. And beyond.

This role of both sexes is crucial to progress of the next generation. They exercise joint factors. This does not make one of the sexes, more superior to the

other. It mere defines the equal, yet separate responsibilities, that add to a greater balanced whole.

The roles of both male and female, are subject to change. To a variable degree. Being lessor, or more, by substitution. Which includes the role of single parenting.

But, the said duality, will not vary from what nature intended. Defined by the advance in intelligence, societal, environmental, and the natural surroundings.

Species that create:

What sets a species apart is their level of intelligence. Bent on, how they define, organize, and control. The environment, territory, and how they interact with nature. And how they have an impact on the nature of their surroundings. Also, how they affect the future generations of a species.

This is to have the power to create, within the realm of a said principle. Within nature. Spirit into matter. A drive that creates, a nature and consistency. That changes, maintains, develops, and that evolves constantly. With the advance of time.

That directly frees, or imprisons, the mind. Both consciously, and sub-consciously. This affects the spirit of the individual. And encodes the soul of the next generation.

This defines a society of humankind. That have created, in both dual roles of male, and female. Individuals who prioritize either, the self, or, the greater. Therefore, the individual is a product of that society. Taught and raised, and nurtured in that society, to be human.

An instance of opposition, of contrast, and of an aspect. Is dualism. That we are more than capable of realizing. The power to create, both out of necessity, and desire. Out of a need, or want.

The principle of Three.

There are three that must agree. That creates the optimum environment. All things created. Outside the realm of natural occurrence.

Examples of the Principle of Three.

The love of a father for his son. Will ensure that his son has grace for, him in old age. And they will both live in peace, and stay in fellowship. Till the end of days.

So, in short, the *mind* applies a principle. That warrants the *conduct* of the said individual. And is visible in the *action* of the individual. Or group. Or a society. Or the world, galaxy, and cosmic populaces.

One of principle. One of nature. One of consistency.

Live your principle. Lead unconditionally. Love your life.

Determinism, fatalism, and freewill.

The Father, the Son, and the Holy Ghost.

The truth is an image. Everything permitted. Inscribed facts in time.

Insight to the Principle of Three.

We observe the truth. And reflect upon it. Thereafter we refer to the image it projects. And discuss the creator, or originator of the truth. Truth be, told. Truth is a perception to the intelligent mind. The image it projects poses a risk to the conscious mind. That has the power to accept its correctness's. Then the sub-conscious mind then makes this a reality. In our lives.

Yet, agreed upon by the accord of power of three, actioned by intelligent creators. Of image and likeness. And of environment. The reward, is its weight in gold.

The parable of a coin.

Nothing is true, only there is image, and the perceived value we attest to it. There is no sin. Everything permitted.

The head always claims more importance than the tail. And portrays an image of lip service. And sadly, demands the lions share. By rite of passage. The tail end of the coin does the administration work. And holds considerably less perceived value. However, the head cannot function, without the balance the tail brings to function. These are two "truths". Dual in nature.

Between the two faces, of the coin represents the fact. It represents the "body" or volume of the metal, giving its worth to the coin. And connects both head and tail, through system, function, and process. And has the least importance, and is, often ignored. Earns the least. And merely exists. The edge of the coin, is the go-to controls, that everyone needs and wants. Preventing theft, and declaring the health of the coin.

Normally why the "heads", side of the coin bears the monetary value. And normally portrays a ruler, or local animal, plant, or a location. That people can identify with. And the monetary value. And is not always worth its weight in gold, that it portrays. This represents only an image, that speaks of a leading role, that the image entices. An asking price of trade. That people give importance to.

So strange, that the make-up of our psychology. Embedded into our currencies.

1. The "head" demands the largest share, that without it, nothing would be. An image, and the right to be.
2. The "tail" claims administration, altered record keeping. In the name of the head by authority.
3. The "edge" encompasses all. The checks and balances it controls. And monitors the untouchable preservation of self-worth. Peer pressures, favoritism, and self-imposed fear, are its tools. That even, "lead the blind".
4. The "body" of the coin, represents fact. The lowest esteemed of them all. That none aspire to emulate. Yet the worth of the coin, is its weight, in that metal. This value is the encapsulation, that holds everything together. Giving vision, purpose, function, process, systems, and governance its life.

This, however might not be in alignment with nature's principle. And so, humans swing back and forth like a pendulum in time. Their will come a time, when humanity aligns its fundamental, and its creative principles with nature. Then all humanity will prosper.

The Principle of Three in phase

A seed from a tree, needs the following to grow. To go through a change of state. The seed needs, a piece of the earth, some water, some wind. Then it needs the combine cycle of influence, by other off-earth-planets. Like the Sun and The Moon.

All in the ideal proportions. At the right time. For the right amount of time. The tree itself, goes through a life cycle of birth, growth, regeneration, regression, then death.

Take a *source*, like a dried piece of wood. From a dead tree. Set the *condition*, of breathable air, for unlimited consumption. Set the piece of wood alight. And you will have the *result*, a fire. It is a change of state to the wood.

Take the useful kinetic *energy* from the fire. The roar, from the flame produces a sound. That *vibrates* the air around the log, causing the movement of the flame. The *frequency* that this flame pulses at the air. Transferring the thermal force to atmosphere.

After the fire has died out. We only observe the ash. With the naked eye. Not so.

You are, left with a change in state to the wood, in another phase. That serves another purpose. The ash when it returns to the soil. It will add to the nutrients to, the volume of the earth. And contribute to the sustenance, the growth, and function of another plant.

The new plant will actively recycle properties from the air, like carbon monoxide, and produce their by-product oxygen. Needed by other species to live. All

species in-turn, will eat from this plant and each other. Creating individual cycle, within a phase.

The power of three. And when conjointly found in an additional phase. It serves another purpose. And should it continue in phase. It will ultimately reveal the force, that drives particle. Then until only consciousness remains.

Again, that consciousness contributes to another living form. The definition of life. The condition of matter, includes the capacity for growth, reproduction, functional activity, and continual change preceding death.

The shape, the sound, and structure of Three.

An interesting fact. Is each shape, in the platonic range. The three-dimensional shapes, have the same number of faces, that meet at the vertices. The tetrahedron, (4 sides), the square, (6 sides), the octahedron, (8 sides), the dodecahedron, (12 sides), and the icosahedron, (20 sides).

Each shape corresponds to a sound, a vibration, and a frequency. A frequency, produces a sound, this vibrates, at resonate frequency, and produces a shape. In nature, they appear in minerals, as crystal formed patterns.

These sounds themselves, have mathematically correlation in the elements. The field of mathematics studies the properties and symmetries, of these shapes. And they serve as model's for naturally occurring crystalline structure

From these shapes, and platonic frequencies. Humankind has discovered, a very long time ago. That the energy points in the body, "Cakra points", and healing, are associated with specific frequency. Achieved by the corresponding sounds, used in meditational methods.

Ancient, old, and modern science. Confirms that each cell in the body has a matching high, and low frequency. That can affect the structure of the cell. And brings about healing, restoration, and rejuvenation of cells. It has also, proved that, another scale of frequency can destroy the same cell. Or, bring disharmony, or produce unhealthy variants.

All platonic shapes correspond to an element, that is useful in alchemy. Like fire, water, air, wind. With the view, that they are the fundamental building blocks to the universe. Later included into alchemy traditions, to understand the composition, and the nature of matter in the universe.

In philosophy, these elemental shapes, build the theory of the universe. The famous Greek philosopher, centered his theory around, The Theory of Forms. Stating that the physical world is an imitation of a higher, eternal reality of eternal abstracts. Amongst other key aspects.

My theory presents three. From this we see that, a Consciousness is behind the force. That drives the principle of three, that makes matter. That bring into being, have influence over, and steering the outcome of matter. Another aspect is the conscious source, the mind of the maker, and the power of a creator.

The principle of four.

Four that must work together. That ensures the most efficient result, in conditions where a group of something, must work together. To achieve a said objective.

That includes all underline mechanism, and other previous principle. The very nature of the principle of four, is rooted in both unicell, and multicellular structure.

For good reason. There is very good example of this principle, of four.

One person has an idea. Then includes a second persons opinion on that idea. They both decide it is a good idea. Then they seek a third person's influence. Now all three must agree. The fourth person who is, introduced brings an offering.

Now the four, pair into two groups of two. So, then structure form. Lead and support roles are, now defined. Within the two groups of two. Tasks are allocated. The report structure is simple.

Two consult and lead, and influence by section. They assemble, present, and debate information. Ultimately one, must make the final decision, for the group. The second lead chairs the fact. The next two will be in support of the said objective.

When such, an objective needs growth. The pattern repeats. The support personal maintains their role in the original group. The support personal of the original group, become the lead of the next group.

So, the pattern becomes a cycle. An energy that ebbs and flows. This influence has now become a culture. A creative transferred power. The result is a force that defines outcome. This is the root cause of evolution. Found in the principle of four.

A note on principle.

From one. Came two. By three's agreement. Four introduced efficiencies.

Group 1.

Ether, consciousness, mind, and creative.

Group 2.

Transformation, regeneration, repair, and evolve.

And so forth.
