

## Sequence of events

Matter throughout all the universes was, made, not created. By the Maker of all.

From the beginning, and the development of a mind. From the formation of a mind, to the development of thought, emotion, and dreams. Before the said event, "The Big Bang".

To the advent of hydrogen. That at the "Big bang event", produced multiple explosions. And five different types of main energy. Including other gases, like helium.

Shortly after the event, "The Big Bang", we see the formation of protons. To the bonding of the electrons to protons. The after a cooling period. Forming hydrogen, advances into another state, neutral hydrogen. And so on. To the next Plasma state. Many, many, many... periods later.

And a by-product, is, water. Which contains 2 hydrogen and one oxygen molecules. So, we find hydrogen in all forms, and it constitutes about three quarters of all known elements. And is the most abundant element in all the universes.

By multiply types of "Big Bangs". These collisions of energy, against each other. Birthed all visible nature. We must assume behind this energy is, the existence of a force that continuously makes all proton, all particle, all matter, and all nature.

The dependence of these elements across vast distances. Formations of these elements that originate by an energy. Which brings the particle of an atom to a vibration. And holds this minute system together in harmonious frequency. Over a period, known as, evolution.

Placed in a spectrum of visible frequency, determined as a realm. All creatures, and species, entwined for such is their form, by a change in various state of vibration. That all of nature is part of ether. That it contains the source, the consciousness of that region. That source of mind and maker. Given the power of creation.

The influence of thought, dreams, and vision that drive. All force, all energy, all proton, all particle, all elements, all matter. That drive all as such.

Within the defined period, and provides a firm place, to sustain. And bring about change and continuation. That there should be, an acceptance toward a new status quo, that this will be our talent, our skill set. A new environment, guided by the march of time, to-ward replacement.
